ABSTRACT

The performance of pupils, individual schools, and the Wichita Public School System is depicted in a quantitative report of the results of the Iowa Tests of Basic Skills (ITBS) administered as part of the system's basic testing program. The ITBS battery measured vocabulary, reading, language, work-study and mathematics skills and results are given by grade within each school and the school system. Adjacent school and system data include enrollment, average attendance percentages, the number of regular classroom teaching positions and the teacher/pupil ratios. Test results for grades 3, 4, 5, 6, and 9 are presented in grade equivalent scores, percentile ranks and quartile points of score distributions. The ITBS results also indicate how the students compare in a specific area across grade and national results. The performance profiles indicate pupils' strengths and weaknesses and are used to help determine individual and group development programs. (CM)

In cooperation with
Dr. Harold G. Glidden,
Coordinator of Guidance and Pupil Evaluation

Division of Research, Planning, and Development Services,
Dr. A. W. Dirks, Director;
Division of Pupil Services,
Dr. Donald E. Younglund, Director

INTRODUCTION

This report depicts the performance of pupils, individual schools, and the Wichita Public School System as a whole. Emphasized herein are results of the (1978 Edition, Form 7) Iowa Tests of Basic Skills as part of the system's basic testing program.

Test results are given by grade within the school and the school system. Other data included by school and system are: enrollment, average attendance percentage, number of regular classroom teaching positions, and the regular classroom teacher; pupil ratio.

The Iowa Tests of Basic Skills (ITBS) measure each pupil's ability to perform in basic areas. Thus the question is answered of how a pupil is doing within a specific area in comparison with others in the same grade in his testing group as well as across the nation.

Test scores can also help determine individual and group programs. The teachers, pupils, counselors, and school administrators have a better understanding of each pupil's strengths and weaknesses.

A Word About the Use of School and Class Averages--

Although it is very appealing to use test scores in attempts to compare schools with each other and with the school system average, such comparisons can be very misleading.

A number of schools in Wichita are program locations for pupils who have been identified as "gifted, talented, and creative." Test scores for these pupils are included in school averages and may, in some cases, present an inflated picture of average test scores for those schools. Conversely, other schools have special programs in such areas as learning disabilities, personal-social adjustment, educably mentally handicapped, hearing impaired, visually impaired, and physically impaired. Opportunities are provided for these pupils to participate in the standardized testing program when it is appropriate. Standardized test scores earned by some pupils in these programs may appear to be low, having a detrimental effect on school averages. Test scores, however, do provide valuable information about the progress of these pupils.

Finally, test scores are most valuable when used one at a time for the benefit of individual pupils. This type of use, through parent-teacher conferences, emphasizes the growth of individual pupils which is not visable when average scores are examined.

DESCRIPTION OF THE IOWA TESTS OF BASIC SKILLS

The ITBS battery measures five major skill areas as designated by subtest heading: Vocabulary, Reading, Language, Work-Study, and Mathematics. Each of the first two subtest areas is covered with a single comprehensive test.

The third subtest, Language, is divided into four portions: spelling, capitalization, punctuation, and usage. (The third grade in the Wichita Public School System is tested with only the spelling portion of the Language subtest.)

Work-Study, which is administered to the fourth, fifth, sixth, and ninth grades in this system, emphasizes map reading, graph and table reading, and reference material knowledge and usage. Mathematics testing is divided into mathematics concepts and problem-solving.

USE OF TEST RESULTS

The basic testing program results serve various educational purposes. The teacher uses test results:

1. To add objective data to other pupil information for planning as well as for meeting with pupils and parents.
2. To identify pupils who need diagnostic tests and/or additional help.
3. To group pupils for instruction.
4. To adapt the curriculum to pupils needs.

In the use of ITBS results, the counselor:

1. Helps the pupil identify his/her strengths and weaknesses and find a basis for self-image improvement.
2. Establishes variances in pupil achievement.
3. Provides information about pupil adjustment.

The supervisor uses ITBS results:

1. To assess educational status and progress of pupil groups.
2. To identify needed curricular emphasis and/or changes.
3. To provide data to help teachers improve instruction.
4. To ascertain needed resources and instructional materials.

Through ITBS, the administrator:

1. Evaluates educational progress.
2. Studies pupil growth patterns.
3. Plans the curriculum and inservice programs.
4. Determines directions of effort and allocations of resources.

INTERPRETATION OF TEST SCORES

Test scores can be reported as raw scores, grade equivalents, or percentile ranks.

Raw Scores (RS)

A raw score is the number of items answered correctly on a given test. Because the raw score alone has little or no meaning, it is converted to a developmental score (grade equivalent or age equivalent) or status score (percentile rank, standard score, or stanine). For the purposes of this publication, interpretation of pupil achievement is made through the combined use of grade equivalent scores and percentile ranks.

Grade Equivalents (GE)

Grade equivalent scores are useful because: (1) they indicate developmental levels and (2) they may be averaged for group comparison purposes.

The grade equivalent of a given raw score on any test indicates the grade level of the typical pupil making that raw score. In GE scores between 3.1 and 8.1, the first digit represents the grade and the second, the month within the grade during which the typical or median pupil makes that raw score. For example, a grade equivalent of 5.7 indicates that the raw score of the pupil in question is that of the typical pupil in the fifth grade at the end of the seventh month. Grade equivalents below 3.1 and above 8.1 may not be interpreted literally as indicated grade and month.

The average yearly growth by definition is 1.0 in the grade equivalent score. Just as talented pupils should be expected to gain more than 1.0 in one year, pupils below average in ability typically gain less than 1.0 in a year.

Grade equivalent scores have been criticized because of misuse. Such scores should be regarded as estimates of pupils' positions along a developmental continuum, not as indices for placement in the graded organization of the school.

Percentile Ranks

The percentile rank shows a pupil's standing within his/her grade. For example, if a fifth-grade pupil makes a score that ranks at approximately the 90th percentile for the fifth-grade norms, this means that 90 percent of the pupils scored lower than he/she and 10 percent scored as well or better in the fifth grade.

Quartile Points

In this publication, scores occupying certain points in the distribution are reported. These are quartile points.

The three quartile points, as their name implies divide the score distribution into four quarters, each with an equal number of pupils' scores. The points themselves are the 75th, 50th, and 25th percentiles, or Q_3 (Quartile 3, the middle of the top half of the distribution), Q_2 (the median of the whole distribution), and Q_1 (the middle of the lower half of the distribution).

A pupil who scores at Q_3 is assigned a percentile rank of 75 in that group. This is the point below which 75 percent of the scores are located. A pupil with a percentile rank of 25 is scoring at Q_1. This is the point below which 25 percent are located. The median or the 50th percentile is the point below which and above which 50 percent of the scores are located.

ELEMENTARY AND SECONDARY SCHOOL PROFILES

The school profiles which follow, include pupil and staff information that may be associated with educational achievement. This information is provided adjacent to test results.

Pupil Information

Enrollment

The enrollment figure given for each school shows the number of pupils enrolled in that school as of September 15, 1980. The system mean enrollment per elementary school was calculated by dividing the system enrollment, pre-school through grade six, by the number of elementary schools. The system mean for junior high schools was computed in the same manner.

Average Attendance

The average attendance is the ratio of the total average daily attendance to the total average daily membership for 1980-81. For instance, on a typical day, 94.2 percent of the pupils enrolled at one school were present.

Staff Information

Number of Regular Classroom Positions

The number of "regular classroom teacher positions" at each school for 1980-81 was obtained from the Division of Personnel Services. Excluded were administrators, nurses, librarians, counselors, special reading teachers, special education teachers, music and physical education teachers, and teachers in federal programs. The system mean was calculated for the elementary and junior high level on the basis of the total "regular classroom positions" and the number of schools by level.

Regular Classroom Teacher:Pupil Ratio (Not Class Size)

The regular classroom teacher:pupil ratio was calculated on the basis of the September 15, 1980, regular pupil school enrollment and the number of

regular classroom teacher positions. The system mean for elementary and junior high schools is the arithmetic average for each level.
